50              60              70              80

This image displays a multiple sequence alignment of UniRef90 entries, specifically focusing on positions 50 through 80. Conserved regions are highlighted with yellow boxes. The sequences are color-coded by residue type, and gaps are indicated by dashes. The alignment shows various patterns of conservation across different proteins, with many positions being highly conserved (yellow boxes) while others show more variation.
